Description

Get economic data series that match search text.

Examples

This request can return either XML or JSON by setting the file_type parameter to xml or json. Note that the default value of file_type is xml. The API key 'abcdefghijklmnopqrstuvwxyz123456' is for demonstration purposes only. Use a registered API key instead.

XML

Request (HTTPS GET)

```
https://api.stlouisfed.org/fred/series/search?search_text=monetary+service+index&api_key=abcdef
```

Response

```
This XML file does not appear to have any style information associated with it. The c

Parameters

api_key

Read API Keys for more information.

- 32 character alpha-numeric lowercase string, required

file_type

A key or file extension that indicates the type of file to send.

- string, optional, default: xml
- One of the following values: 'xml', 'json'

xml = Extensible Markup Language. The HTTP Content-Type is text/xml.
json = JavaScript Object Notation. The HTTP Content-Type is application/json.

search_text

The words to match against economic data series.

search_type

Determines the type of search to perform.

- One of the following strings: 'full_text', 'series_id'.
- 'full_text' searches series attributes title, units, frequency, and tags by parsing words into stems. This makes it possible for searches like 'Industry' to match series containing related words such as 'Industries'. Of course, you can search for multiple words like 'money' and 'stock'. Remember to url encode spaces (e.g. 'money%20stock').
- 'series_id' performs a substring search on series IDs. Searching for 'ex' will find series containing 'ex' anywhere in a series ID. '*' can be used to anchor searches and match 0 or more of any character. Searching for 'ex*' will find series containing 'ex' at the beginning of a series ID. Searching for '*ex' will find series containing 'ex' at the end of a series ID. It's also possible to put an '*' in the middle of a string. 'm*sl' finds any series starting with 'm' and ending with 'sl'.
- optional, default: full_text.

realtime_start

The start of the real-time period. For more information, see Real-Time Periods.

- YYYY-MM-DD formatted string, optional, default: today's date

realtime_end

The end of the real-time period. For more information, see Real-Time Periods.

- YYYY-MM-DD formatted string, optional, default: today's date

limit

The maximum number of results to return.

- integer between 1 and 1000, optional, default: 1000

offset

- non-negative integer, optional, default: 0

order_by

Order results by values of the specified attribute.

- One of the following strings: 'search_rank', 'series_id', 'title', 'units', 'frequency', 'seasonal_adjustment', 'realtime_start', 'realtime_end', 'last_updated', 'observation_start', 'observation_end', 'popularity', 'group_popularity'.
- optional, default: If the value of search_type is 'full_text' then the default value of order_by is 'search_rank'. If the value of search_type is 'series_id' then the default value of order_by is 'series_id'.

sort_order

Sort results is ascending or descending order for attribute values specified by order_by.

- One of the following strings: 'asc', 'desc'.
- optional, default: If order_by is equal to 'search_rank' or 'popularity', then the default value of sort_order is 'desc'. Otherwise, the default sort order is 'asc'.

filter_variable

The attribute to filter results by.

- One of the following strings: 'frequency', 'units', 'seasonal_adjustment'.
- optional, no filter by default

filter_value

The value of the filter_variable attribute to filter results by.

- String, optional, no filter by default

tag_names

A semicolon delimited list of tag names that series match all of.

- String, optional, no filtering by tags by default
- Example value: 'usa;m2'. Filter results to series having both tags 'usa' and 'm2'.
- See the related request fred/tags.

exclude_tag_names

A semicolon delimited list of tag names that series match none of.

- String, optional, no filtering by tags by default.
- Example value: 'discontinued;m1'. Filter results to series having neither tag 'discontinued' nor tag 'm1'.

- Parameter exclude_tag_names requires that parameter tag_names also be set to limit the number of matching series.
